A solid tradition in innovation

## TELEFLEX AIRWAY MANAGEMENT – A SOLID TRADITION IN INNOVATION

Trusted brands make Teleflex a reliable and strong partner. Built on a solid tradition of innovation, Teleflex is a global leader in superior medical supplies designed to help providers minimise risk and maximise outcomes for their patients. Our understanding of the importance to our customers of a full range of products has led to the development of a unique line of medical devices, all of which complement one another.

Every article supplied by the Teleflex brands LMA, RÜSCH, HUDSON RCI, GIBECK and SHERIDAN is the result of many years of manufacturing experience, specialisation, as well as cooperation with well-known medical experts. Our primary concern is to offer you products of constant quality & unparalleled performance in the field of airway management, to help you focus on what's most important: your patient.

You can find further details and the technical specifications of our products within this brochure.

### TELEFLEX – HIGH QUALITY MEDICAL SUPPLIES FROM A SINGLE SOURCE

# RÜSCH ENDOTRACHEAL TUBES

The optimum tube for all applications. At RÜSCH, this demand is met thanks to an extraordinarily extensive and versatile range of tubes. All RÜSCH tubes feature an outstanding I.D. to O.D. ratio. Our high quality standards are reflected in the high-grade materials we use, which are tested according to the highest medical standards.

To meet the special requirements of paediatric patients, Teleflex's RÜSCH brand supplies a large variety of tracheal tubes in smaller sizes. Tracheal tubes for paediatric care are marked with black tip to ensure safe tracheal positioning.

CHILD AGE	TUBE I.D.	BLACK TIP LENGTH
1.	2.0–3.5 mm	20 mm
2.–5.	4.0–5.0 mm	30/40 mm
6.–14.	5.5–6.5 mm	40 mm

## TRACHEAL TUBES:

1. Before using tracheal tubes with the connector pushed on halfway, it must be ensured that the connector is pushed into the tube shaft as far as it will go.
2. To improve the tight hold, it is advisable to clean with ethanol, both the contact surface of a connector that has been loosened once or removed and the corresponding tube shaft, before reinserting it.
3. This particularly applies to those cases in which the connector was completely removed first (e.g. for fiberoptic insertions), or was pushed on again after the tube had been shortened.

## ISIS ETT

### ENDOTRACHEAL TUBE WITH INTEGRATED PORT FOR OPTIONAL SUBGLOTTIC SECRETION SUCTIONING

The ideal tube to provide the best of care to all your patients, up to 30 days.

nasal/oral 1 eye (Murphy)

Sizes: I.D. 6.0–9.0 mm

This convertible endotracheal tube with separate suction line allows for subglottic secretion removal on demand. This frees the clinician from the burden of deciding for an expensive tube at the time of intubation or to extubate/re-intubate a patient to provide a VAP prevention method of subglottic secretion suctioning. Thanks to the ISIS flexible design, subglottic suctioning can be provided to any patient whenever necessary.

### SUCTION LINE FOR ISIS ENDOTRACHEAL TUBE

When connected to the ISIS endotracheal tube, the optional suction line provides access from the top of the ETT cuff for easy & safe suctioning of the subglottic secretions that spill over the cuff. Available separately.

1 size fits all ISIS tubes

# SHERIDAN ENDOTRACHEAL TUBES

Supplied under the SHERIDAN brand name, our endotracheal tubes offer all the features needed by today's health-care professionals, including a high level of tactile feed-back from the pilot balloon, thermosensitive PVC,

which allows the tubes to soften at body temperature, as well as a smooth tube tip that is moulded and gently cupped to minimise trauma during intubation.

## SHERIDAN ISIS HVT

**ENDOTRACHEAL TUBE WITH INTEGRATED PORT FOR OPTIONAL SUBGLOTTIC SECRETION SUCTIONING WITH HIGH VOLUME TAPERED CUFF**  
nasal/oral, 1 eye (Murphy)

The ideal tube to provide the best of care to all your patients, both over the short- & long-term.

The unique convertible nature of the Teleflex ISIS HVT frees clinicians from the burden of choosing which tube is best for the patient at the time of intubation. ISIS features an integrated suction port and separate suction line allowing for subglottic secretion removal whenever necessary. Both connection ports can be sealed upon disconnection, reducing the risk of cross-contamination when not in use. When needed, the suction tube attaches to the ISIS HVT via a secure locking connection.

**HIGH-VOLUME TAPERED, LOW-PRESSURE CUFF**  
nasal/oral, 1 eye (Murphy)

The high-volume, large diameter cuff provides a positive tracheal wallseal, while the low-pressure cuff minimises capillary restriction. The tapered cuff reduces the risk of micro-aspiration, increases ease of use & minimises the risk of herniation.

# RÜSCH BRONCHIAL TUBES AND BLOCKERS

All RÜSCH endobronchial tubes are characterised by high-quality workmanship. They are made of highly flexible and thermoplastic materials. Thanks to special features like the special shape of the bronchial cuff on right-sided models or the extremely soft Carina hook (Carlens and White type), RÜSCH endobronchial tubes are both safe and patient-friendly.

This is particularly true in case of our EZ-Blocker. Thanks to its y-shaped design, this innovative bronchial blocker anchors itself on the carina and will not dislocate following inflation of the isolated lung. After the procedure, when the EZ-Blocker has been removed, there is no need to reintubate the patient.

## SINGLE-LUMEN BRONCHIAL TUBES

### BRONCHIAL TUBE MADE OF PVC

semi-seated connector, valves for Luer and Luer-lock syringes, colourless tracheal low-pressure cuff with colourless pilot balloon, blue bronchial low-pressure cuff with blue pilot balloon, continuous X-ray marker and additional cuff markers, stylet, graduated

- latex-free
- sterile

#### ANGLED CONNECTOR

- made of transparent plastic
- double sealing cap made of silicone with small closable opening
- rotating connectors

# LARYNGEAL MASKS

The true benefits of laryngeal masks are firstly that they are less invasive than endotracheal tubes, and secondly, that they can be easily inserted. As such laryngeal masks are used for airway management in both anaesthesia and emergency medicine. Thanks to their soft, thin-walled

cuff, they efficiently help to prevent potential traumas caused by excessive pressure. Teleflex offers a wide range of laryngeal masks. This includes the second generation gastric access airway LMA Supreme™ and the SureSeal featuring an integrated cuff pilot.

## LMA SUPREME™

LMA SUPREME™ IS A SECOND GENERATION, GASTRIC ACCESS AIRWAY WITH AN EFFECTIVE FIRST SEAL™ AND SECOND SEAL™.

The Second Seal™ can be easily established and verified, elevating safety and delivering a new standard of care for both routine and more advanced procedures.

2 SEPARATE  
ROUTES

FIRST SEAL™  
(OROPHARYNGEAL SEAL)

SECOND SEAL™  
(OESOPHAGEAL SEAL)

### FIRST SEAL™

LMA Supreme™ delivers measured oropharyngeal leak pressures up to 37 cm H<sub>2</sub>O.<sup>1</sup>

The First Seal™ is important for:

- ventilation performance
- advanced uses of the device such as in patients with decreased thoracic compliance, in mild-to-moderately obese patients, and in certain procedures requiring mechanical ventilation where higher seal pressures are required

<sup>1</sup> Van Zundert A., Brimacombe J. *Anaesthesia* 2008; 63: 202-213.

<sup>2</sup> Cook T.M. et al. *Anaesthesia* 2009; 64: 555-562.

### SECOND SEAL™

LMA Supreme™ enables passive drainage or active management of digestive tract contents independent of ventilation.<sup>2</sup>

The Second Seal™ is designed to:

- improve safety vs a first generation device
- secure the distal tip of the LMA Supreme™ at the upper oesophageal sphincter and to maintain the patency of the drain tube
- reduce the risk of insufflation during ventilation
- reduce the risk of regurgitated gastric content leaking around the tip of the mask

## LMA SUPREME™

### LARYNGEAL MASK WITH DRAIN TUBE, MADE OF PVC

LMA Supreme™ is a single use second generation, gastric access device which forms an effective First Seal™ with the oropharynx (oropharyngeal seal) and an innovative Second Seal™ with the upper oesophageal sphincter (the oesophageal seal).

- latex-free
- sterile
- single use

## LMA FLEXIBLE™

STERILE LARYNGEAL MASK, MADE OF PVC, FLEXIBLE TUBE

The unique design of LMA Flexible™ allows the tube to be moved out of the surgical field without displacement of the cuff, or loss of seal for the anaesthetist. LMA Flexible™ acts as a barrier, preventing soiling of the glottis or trachea by blood or secretions from above.<sup>3</sup>

LMA Flexible™ makes it possible to operate in the mouth or throat with the benefits of an LMA Airway™.

## SURE SEAL & CUFF PILOT™

SURE SEAL combines all the features you would expect to find in a high-quality laryngeal mask. The mask itself is made of 100% silicone and is finely shaped to perfectly contour the oropharyngeal space without trauma. The tube is available in both silicone and PVC according to preference.

A reinforced laryngeal mask complements the range. Our Sure Seal product line is further distinguished by a unique cuff pressure monitoring device that enables you to improve patient care and safety: the Cuff Pilot™ provides constant, at-a-glance, visual information on the pressure in the mask.

# LMA ATOMIZATION™

With its innovative technology the LMA Atomization™ range offers a simple and effective solution to drug delivery. The unique tip of the LMA Atomization™ devices

atomizes drugs into a fine mist of particles 30–100 microns in size.<sup>1</sup> The particles are then absorbed through the mucosal tissue and into the bloodstream.

## LMA MAD NASAL™

### INTRANASAL MUCOSAL ATOMIZATION DEVICE

LMA MAD Nasal™ is an effective and needle-free route for delivering medication via the nasal mucosa.

The unique design of LMA MAD Nasal™ enables a seal to be formed with the nostril and delivers atomized particles of medication to the nasal mucosa.

The particles are then absorbed through the nasal mucosa and into the bloodstream, avoiding first pass metabolism.

# OROPHARYNGEAL/ NASOPHARYNGEAL AIRWAYS

For quick and safe airway patency without intubation the user can choose from an extensive range of RÜSCH oropharyngeal and nasopharyngeal airways.

All versions have been specifically developed to meet the customer's requirements and thus represent a safe and adequate solution for most indications. RÜSCH offers not only

standard versions made from a variety of materials but also special models for endoscopy that offer simultaneous fixation of the tracheal tube. Thanks to the broad selection, these RÜSCH products have become indispensable in many situations.
